

*Walterscheid Australia Introduces
The New Cat 4 Hydraulic Top-Link*

WALTERSCHEID

Cat. 4 Hydraulic Top Link

The demands on the WALTERSCHEID Tractor Attachment Systems are as varied as agriculture itself. Consequently, when developing Tractor Attachment System components, we give consideration to all the factors that have an influence on farming practice.

In a time where tractors and implements are increasing in capacity we have released a new WALTERSCHEID hydraulic Top-Link with a hook in Cat. 4. This Hydraulic Top-Link is suitable for permissible operating ranges between 250HP - 400HP and can be used with the already established Cat. 4 Lower-Link Hooks.

All WALTERSCHEID Hydraulic Top-Links can be set to the desired length from the convenience and safety of the tractor seat - whether the implement is attached or not.

*Talk to our friendly sales staff for full details on how to hook up.
WALTERSCHEID has the right products for every application.*
