Hydraulically Adjustable Stabilizer HVST

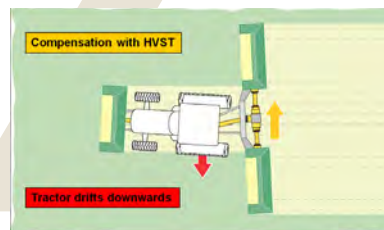

The Hydraulically adjustable stabilizer gives the opportunity to side shift the complete 3 point linkage including any implement laterally up to +/- 250mm.

Therefore as an example for front and rear mower combination results in:

- Much better overlapping during curved driving
- Much better overlapping at slope mowing (anti-shift)
- Much better adjusting of implements along obstacles.

Example: Slope moving without any anti-drift system.

Example: Slope moving with the hydraulically adjustable stabilizer HVST

Function:

The hydraulically adjustable stabilizer allows the following lateral movement (side-shift):
 Stabilizer: +/- 40mm*
 Lower Link: +/- 125mm*
 Implement: +/- 250mm*

The HVST is installed into the same area as our market leading automatic stabilizer the ASST-B. The hydraulics are connected to and operated by a double acting SCV.
